INTERNET MULTIFEED CO.

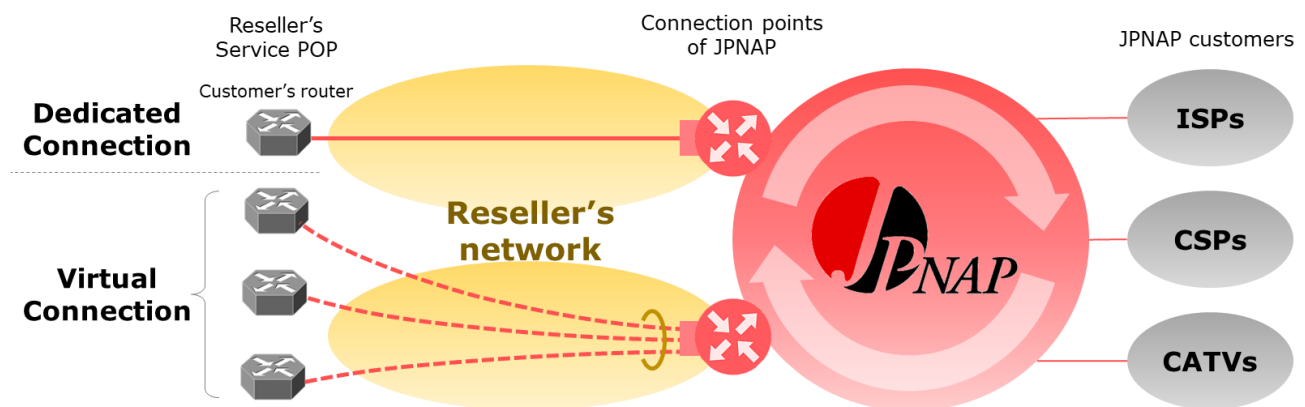

JPNAP launches Reseller Program

Tokyo, 24 October 2019: Japan’s leading Internet Exchange (IX), JPNAP which is operated by INTERNET MULTIFEED, launches Reseller Program to enhance partnership with network service providers, datacenter providers and other internet exchange providers all over the world, particular in APAC region.

The providers who join Reseller Program can provide JPNAP service bundled with their own service to the customers (ISPs, CSPs and so on).

Our Reseller Program allows to provide Resellers 2 methods of connection, providing dedicated JPNAP port at our connection point (Dedicated Connection) and providing VLAN to access JPNAP on shared NNI connection between Reseller and JPNAP (Virtual Connection). Resellers can provide necessary bandwidth which customers request from their own connection points deployed all over the world and optimize customers’ network cost.

Connection to JPNAP via Reseller

Current Resellers (As of 24 October 2019).

- ITP Limited
- PT. NTT Indonesia

- GLBB Japan KK

*Please ask the Resellers directly about service specs, fees and the other conditions.

For more details and contacts of Resellers, please refer to our website.
