

## **PRESS RELEASE**

May 21, 2025  
INTERNET MULTIFEED CO.

### **JPNAP has officially announced RETN as a reseller of its remote IX service through our strategic partnership.**

Internet Multifeed Co. (operating IX services as "JPNAP") today has announced a strategic partnership with RETN, a leading independent global network service provider headquartered in London, for its JPNAP Internet exchange service, making RETN the official reseller of JPNAP services.

This partnership unlocks streamlined access to JPNAP's extensive network for RETN customers, enabling direct peering with key Japanese and international networks. As demand for Japanese content and services grows globally, international telecom companies are increasingly looking to enter the Japanese market - without having to invest in infrastructure locally.

JPNAP's strategic location and high concentration of network operators make it a critical interconnection point for Asia. The Remote IX services with RETN will open the key Asian markets, including Taiwan, Hong Kong, Singapore, and Korea, connecting customers to JPNAP and enabling them to capitalise on Japan's digital economy. At the same time, Japanese networks benefit from RETN's extensive Eurasian infrastructure, creating a two-way bridge between Japan and the rest of the world.

#### **About RETN**

RETN is one of the fastest growing independent Eurasian network service providers and was awarded Innovation Disruptor of the Year at the prestigious Global Connectivity Awards 2024.

RETN's unique solution for connecting Europe and Asia is built on a unique homogeneous DWDM and IP/MPLS network platform and an extensive branching land route through Western Europe, Eastern Europe and Central Asia to the border

with China and further into Southeast Asia.

RETN provides communication services across the network of excess matters, with short lead times, industry-leading uptimes and multi-layered Eurasia.

To learn more about RETN and its services, visit their website at [www.retn.net](http://www.retn.net).

## **About JPNAP**

As a pioneer of Internet Exchange (IX) services in Japan, JPNAP has played a foundational role in supporting the growth of the internet since its earliest days. In collaboration with domestic vendors, we have led the development of cutting-edge optical switches and are continuously committed to minimizing downtime while delivering services of the highest global standard.

As a driving force behind Japan's IX landscape, JPNAP is dedicated to enhancing existing quality benchmarks and redefining global standards, guided by our mission to support the core of IT infrastructure. As a Japan-born IX, we will continue to meet the exacting demands of our customers and relentlessly pursue the possibilities of new technologies.
