INTERNET MULTIFEED CO.

JPNAP Internet Exchange Service Named a Google Gold Verified Peering Provider

Internet Multifeed Co. is pleased to announce that its Internet Exchange service “JPNAP” has achieved Google Gold Verified Peering Provider status.

Peering Provider
Verified Gold

<Gold Certified Badge for Verified Peering Providers>

The Verified Peering Provider program identifies Internet service providers (ISPs) that have demonstrated diverse and reliable connectivity to Google’s network and met specific technical requirements and performance standards outlined by Google.

JPNAP has not only built a strong track record in large-scale traffic exchange and operations over many years, but also continuously works to improve service quality through various initiatives. Achieving Google Gold Verified Peering Provider status is recognition of JPNAP’s ability to provide high-quality connectivity, including regional redundancy across Tokyo and Osaka, full POP redundancy within each region, and stable, low-latency dedicated connections.

Customers using JPNAP can now access all Google services reachable via the Internet without needing to meet Google’s peering requirements themselves*.

Going forward, JPNAP will continue to respond to the growing demand for Internet traffic, contributing to the further development of the Internet and enhancing its

reliability as a vital social infrastructure.

Notes:

*Separate application is required for use.

About JPNAP

As a pioneer of IX services in Japan, JPNAP has built the foundation supporting the Internet's growth since its early days. We have consistently pursued world-class quality, from co-developing optical switches with domestic vendors to minimizing downtime.

As a leading IX in Japan, JPNAP is committed to raising quality standards even further and setting new global benchmarks. As a Japan-originated IX, we will continue to meet customers' high expectations and relentlessly explore the possibilities of new technologies.
